ABSTRACT:

PROBLEM TO BE SOLVED: To provide a navigation system that can easily be mounted even on a two wheeler having a little loading space for auxiliaries by providing a movable communication terminal end

transmitting a command signal
and receiving operation directive information, a
navigation device, and a
helmet.

SOLUTION: A data communication part 21 in a
mobile communication terminal 20
transmits information such as present position
computed by the processing unit
12 of a navigation device 10 to an information
center 50 through a
transmission/reception antenna 29, receives
information on such items as the
destination, pass-through places, and a travel
route obtained based on the
information from the information center 50, and
transmits it to the memory
device 14 of the navigation device 10. The
processing unit 12 of the
navigation device 10 computes the present position
based on the radio wave from
a GPS received by a receiving antenna 11. Inside a
helmet 30, a microphone 33
is provided on the part opposite to the mouth or
the throat, and a speaker 34
for hearing a voice signal or the like received
with the mobile communication
terminal 20 on the part opposite to the ear hole of
the operator or the like.

ABSTRACT:

PROBLEM TO BE SOLVED: To provide devices capable of holding a conversation between front and rear two persons or neighboring helmet wearers with each other when using the helmets on a motor bicycle or

enjoying music, etc., with a radio or a tape recorder when wearing the helmet.

SOLUTION: The helmets comprise each of microphones (1) and (6) and each of speakers (2) and (7) respectively fitted to the two helmets and transceivers (3) and (8) thereof directly connected with a cable (5) and capable of exchanging radio waves with two antennas (4) and (9).
